## What are the risks?

Intensity of drug use and risky sexual behaviours among women in festival settings

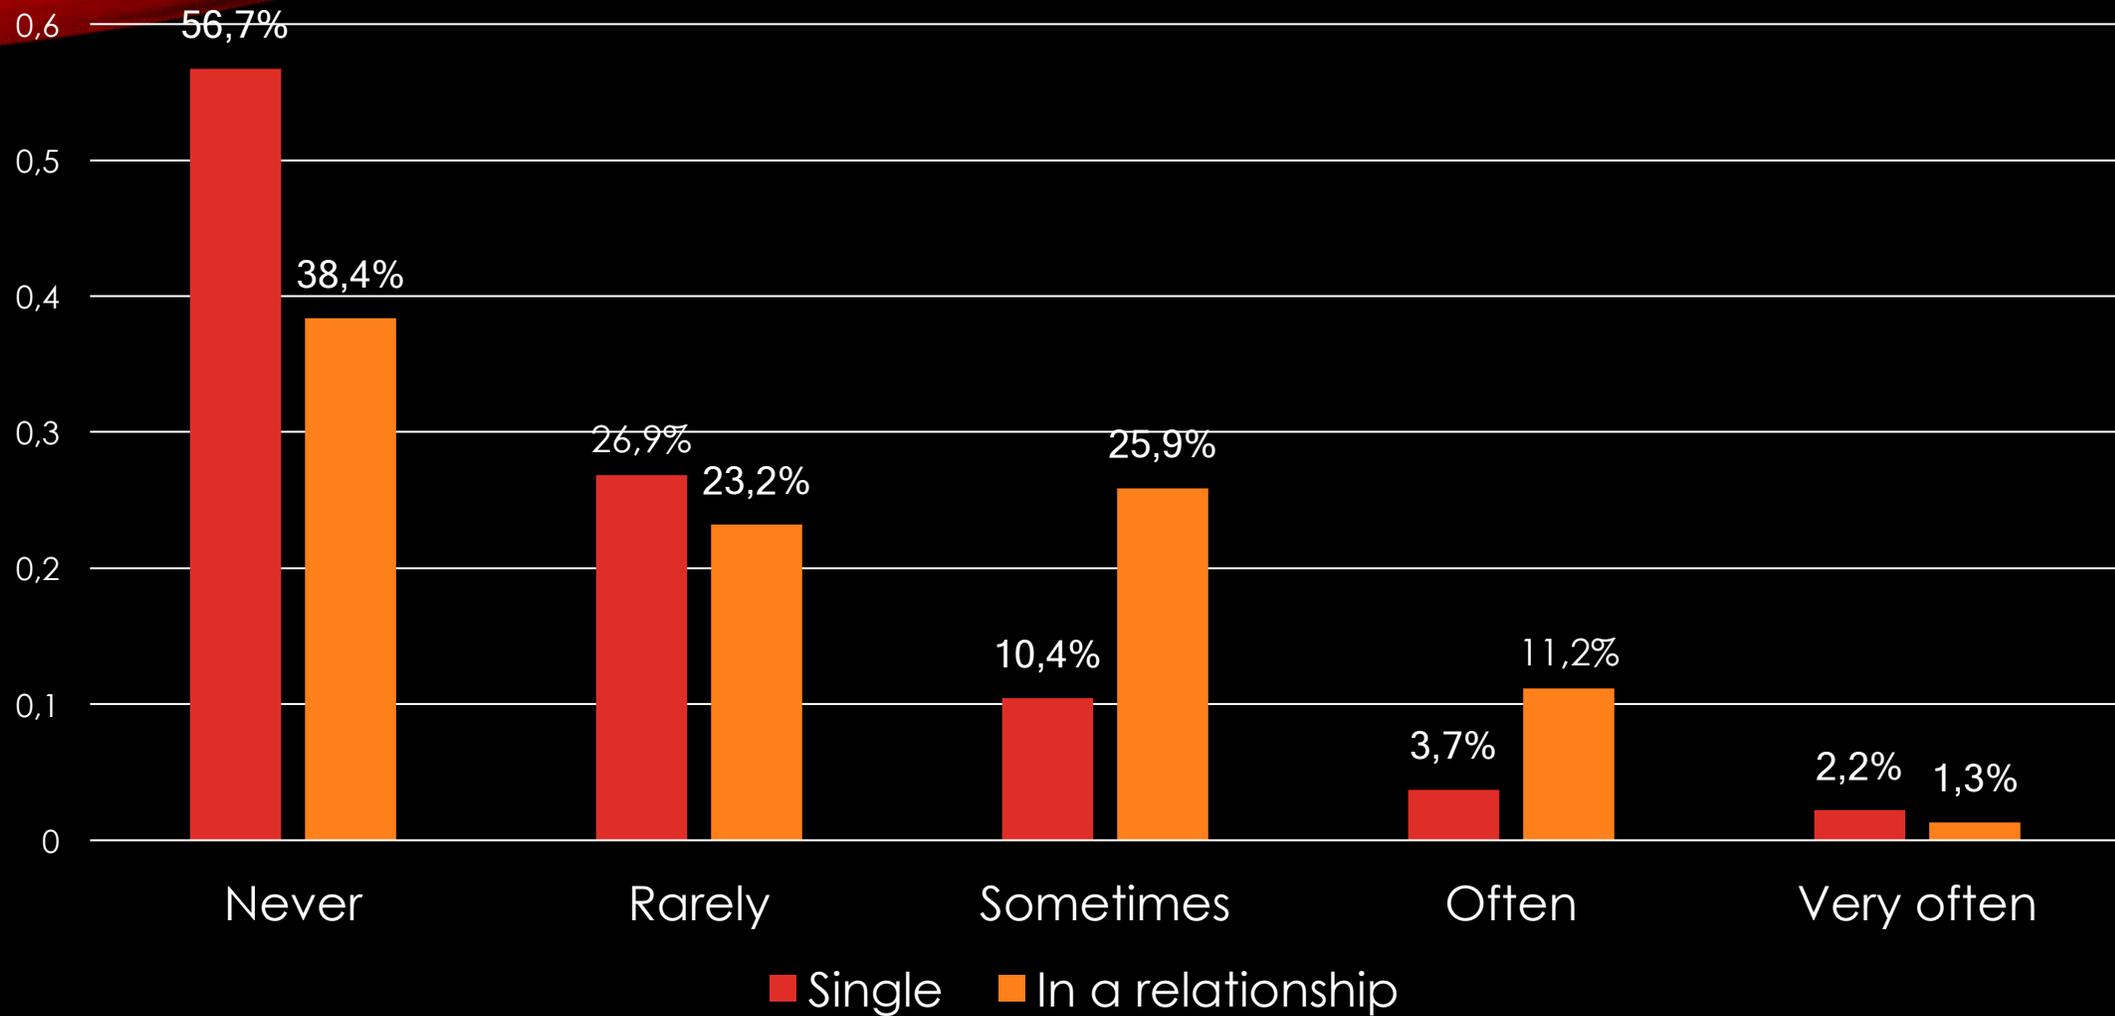

A vibrant festival scene at night, featuring colorful, illuminated structures and people. The scene is dominated by a large, multi-colored canopy or tent structure with green, blue, and purple hues. The background is dark, with various lights and structures visible, creating a festive atmosphere. The text is overlaid on the left side of the image.

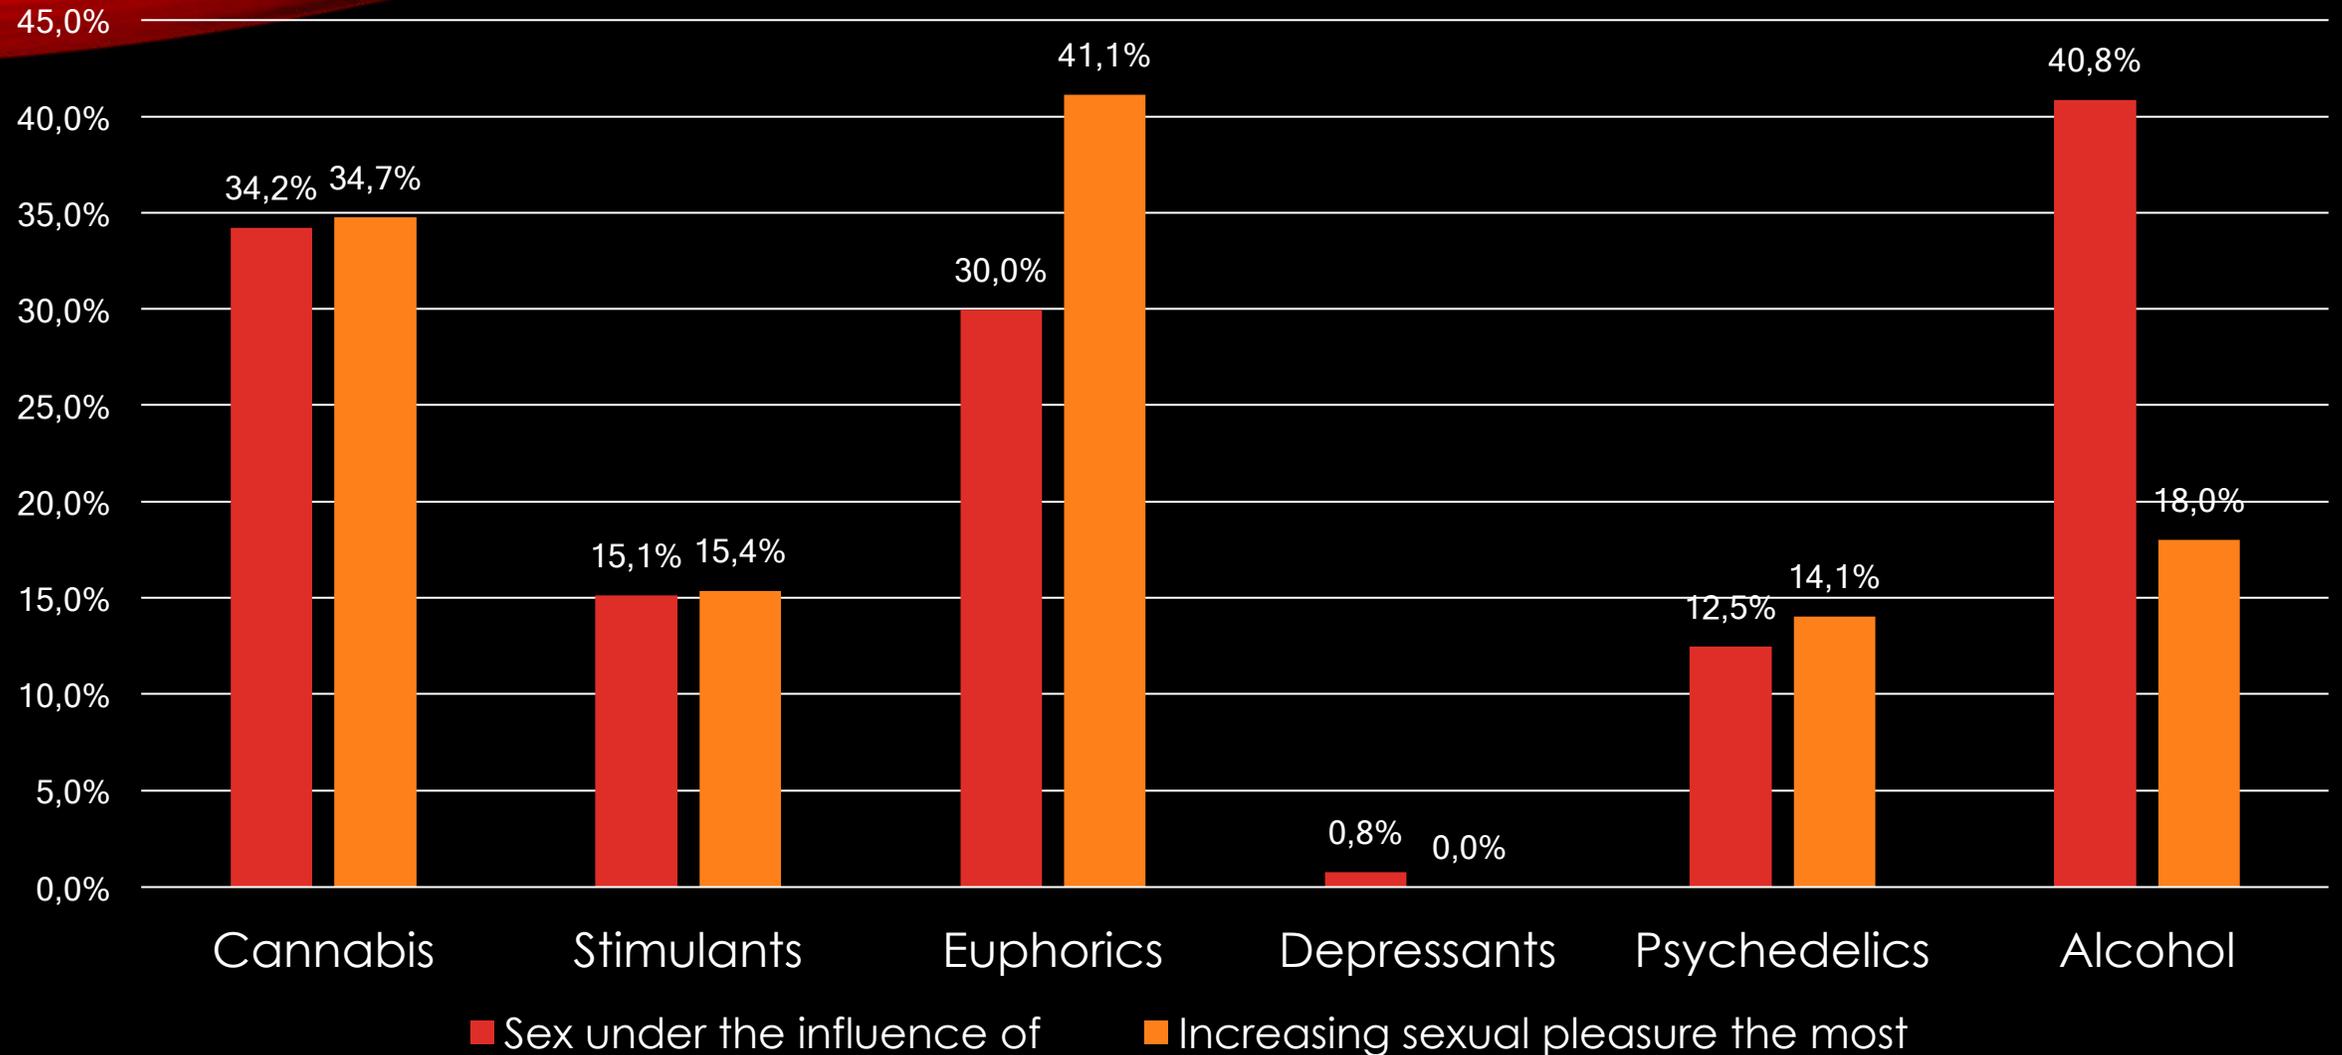

# How did this research happen

- Media news about sexual abuse at festivals
- Accounts of young women
- Ethics
- Criticism
- Festivals reluctance

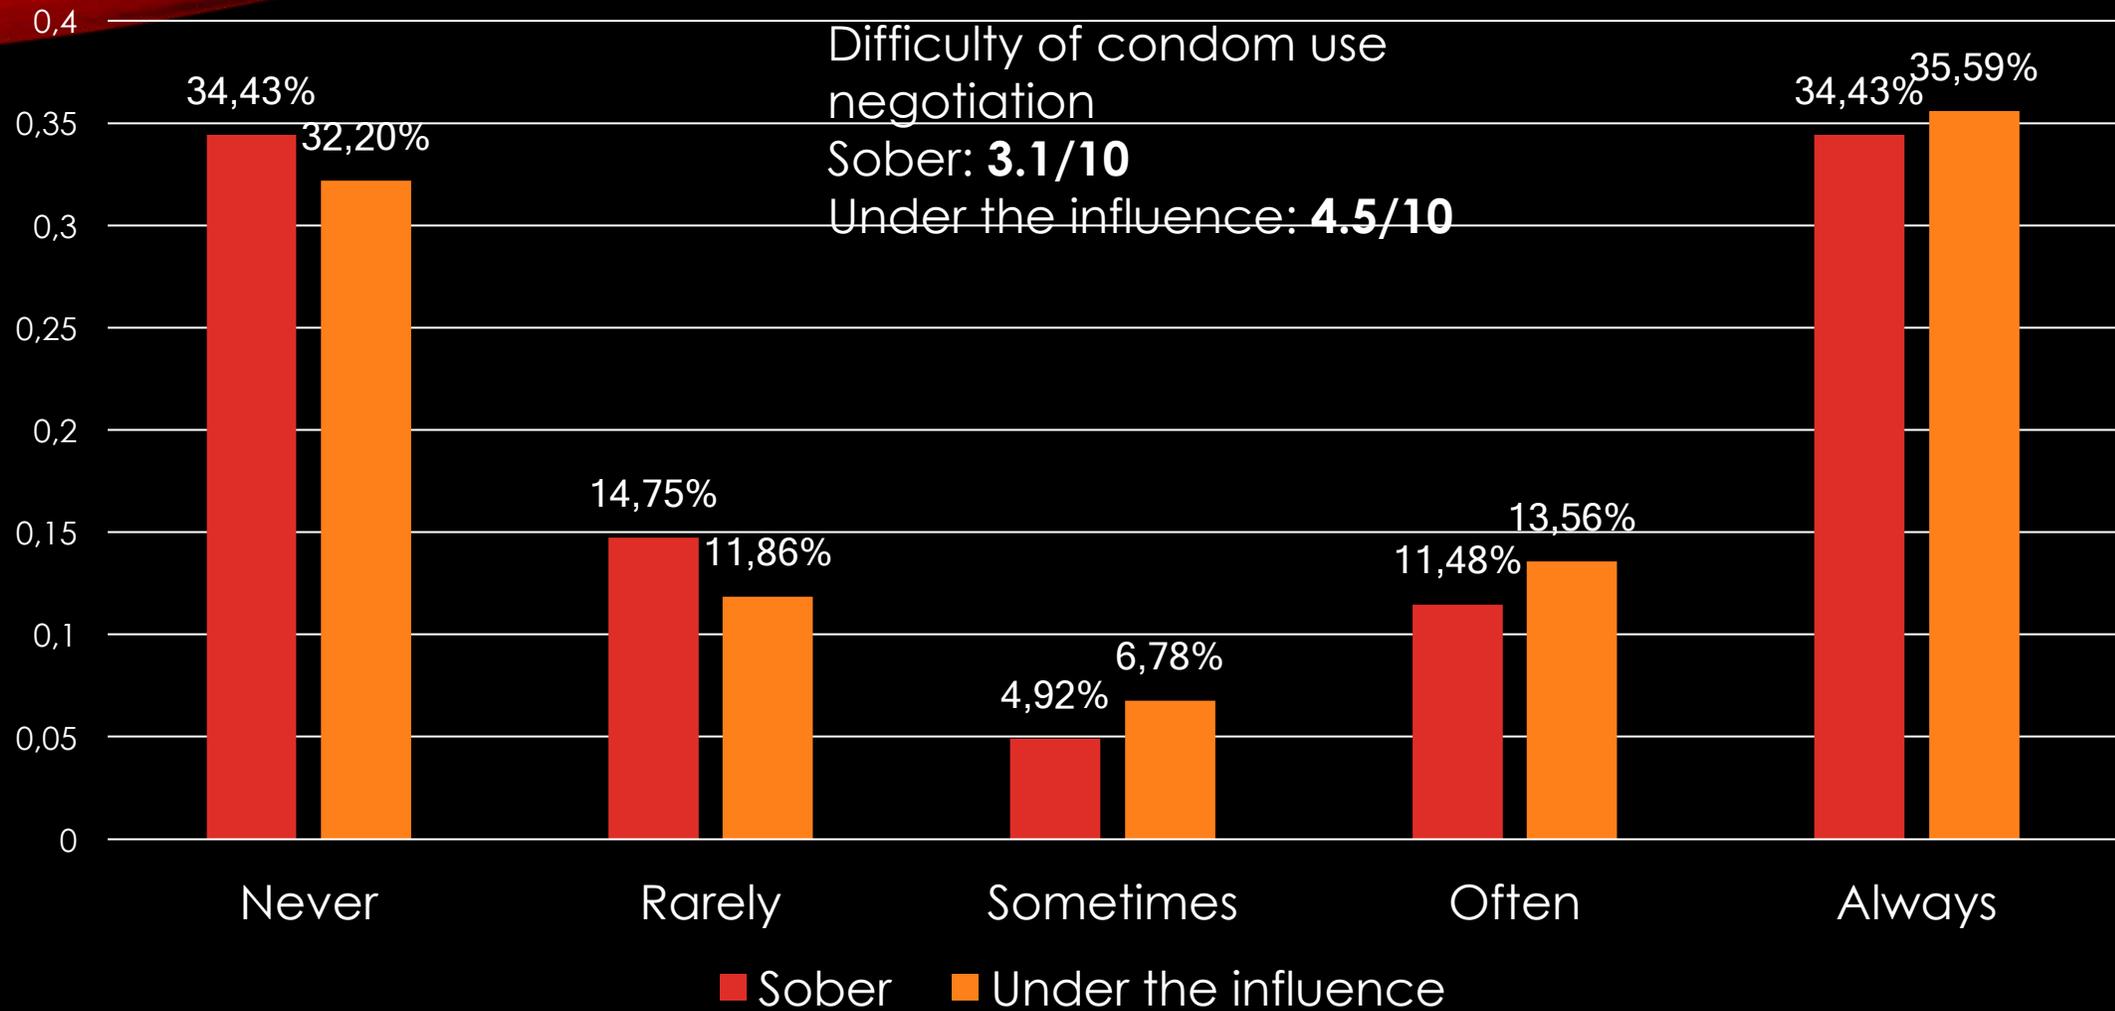

# Frequency of sexual contacts while being under the influence

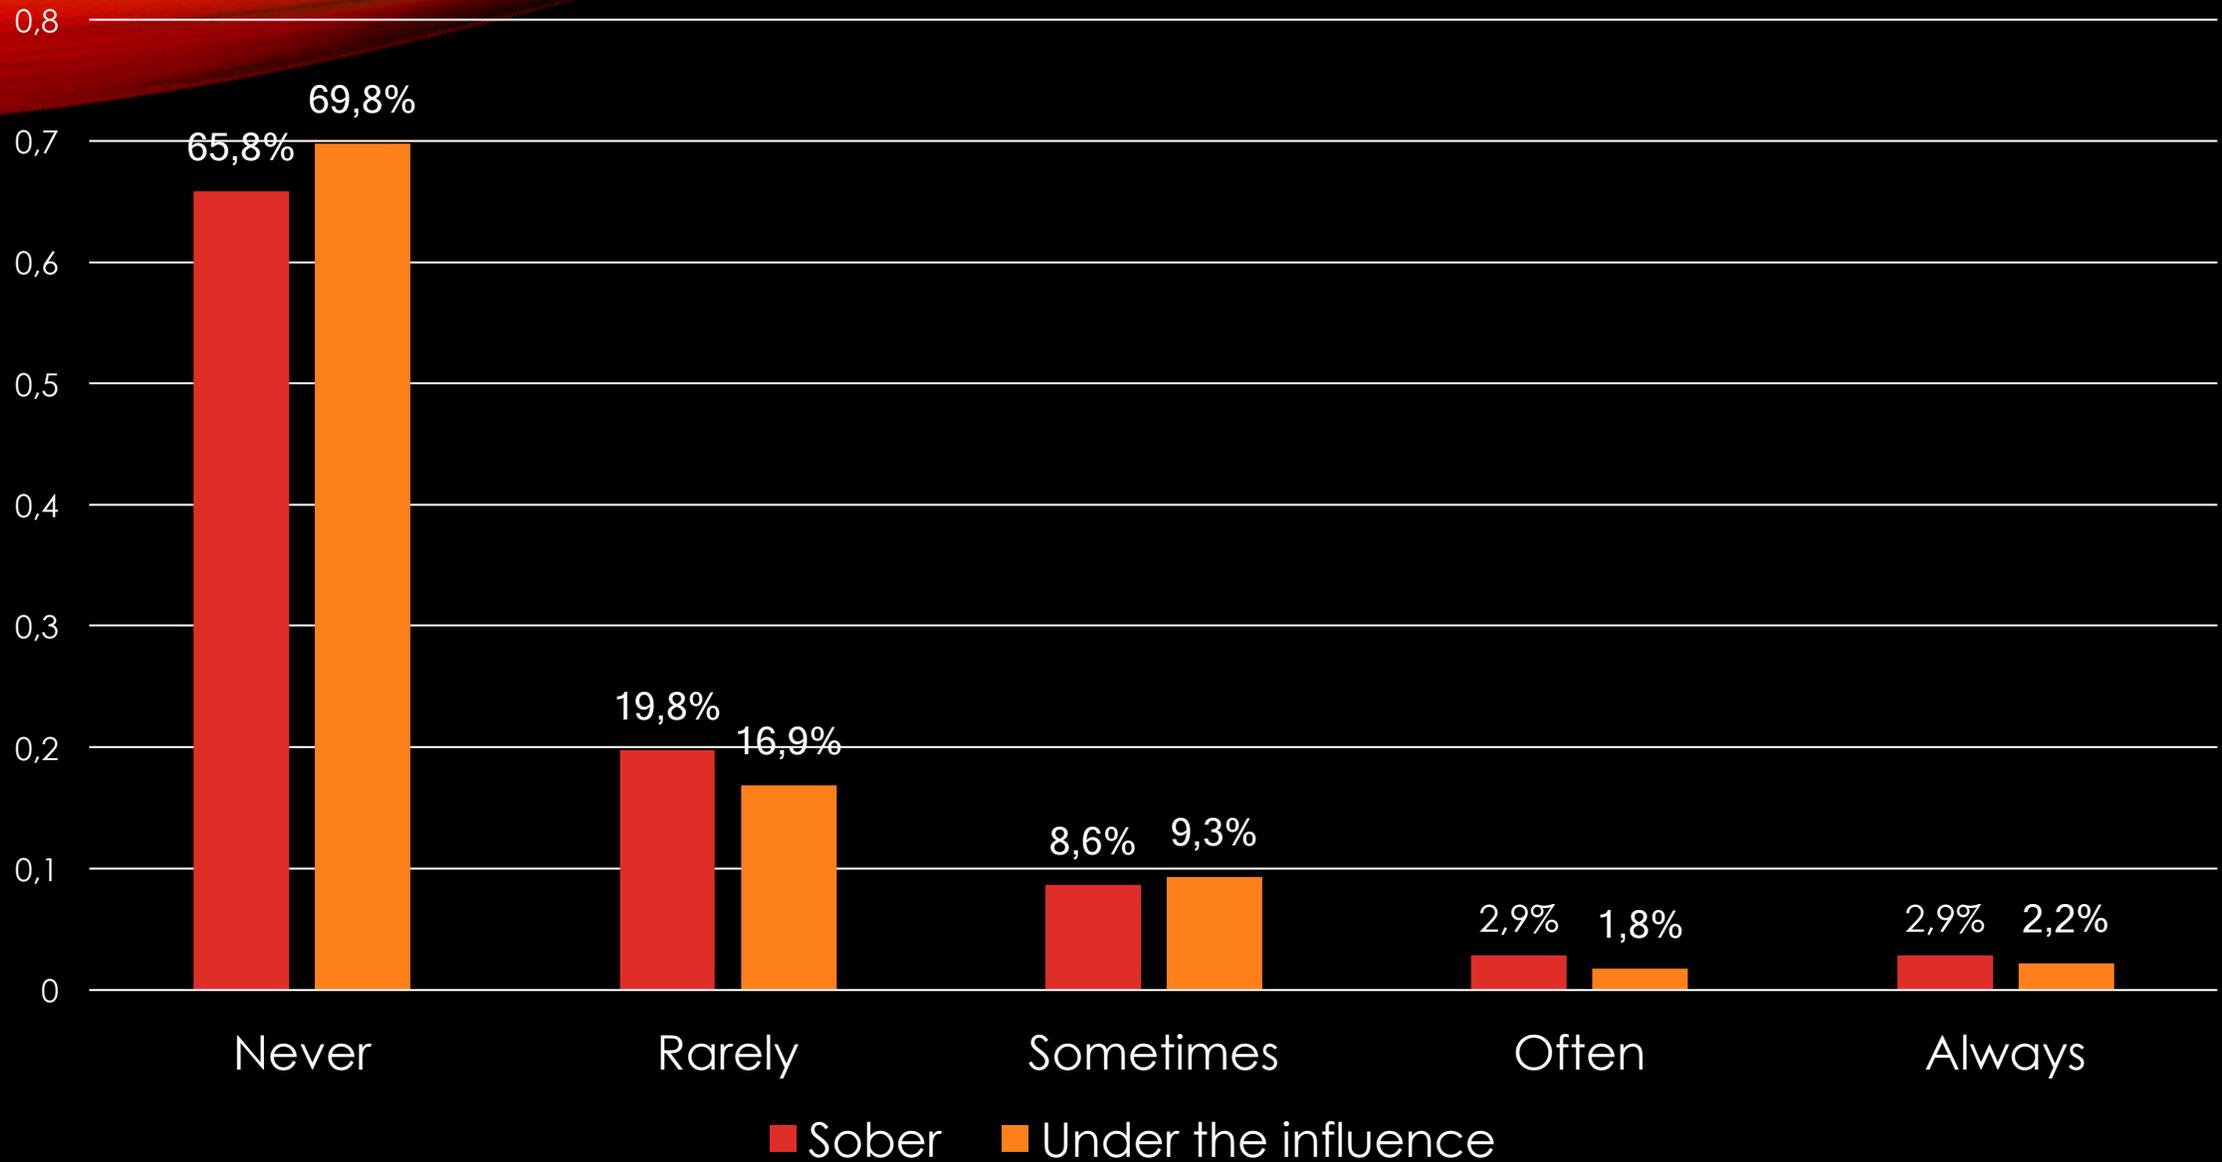

# Substances women have enthusiastic sexual contacts vs. perception of substances increasing sexual pleasure

# Frequency of condom use - single women

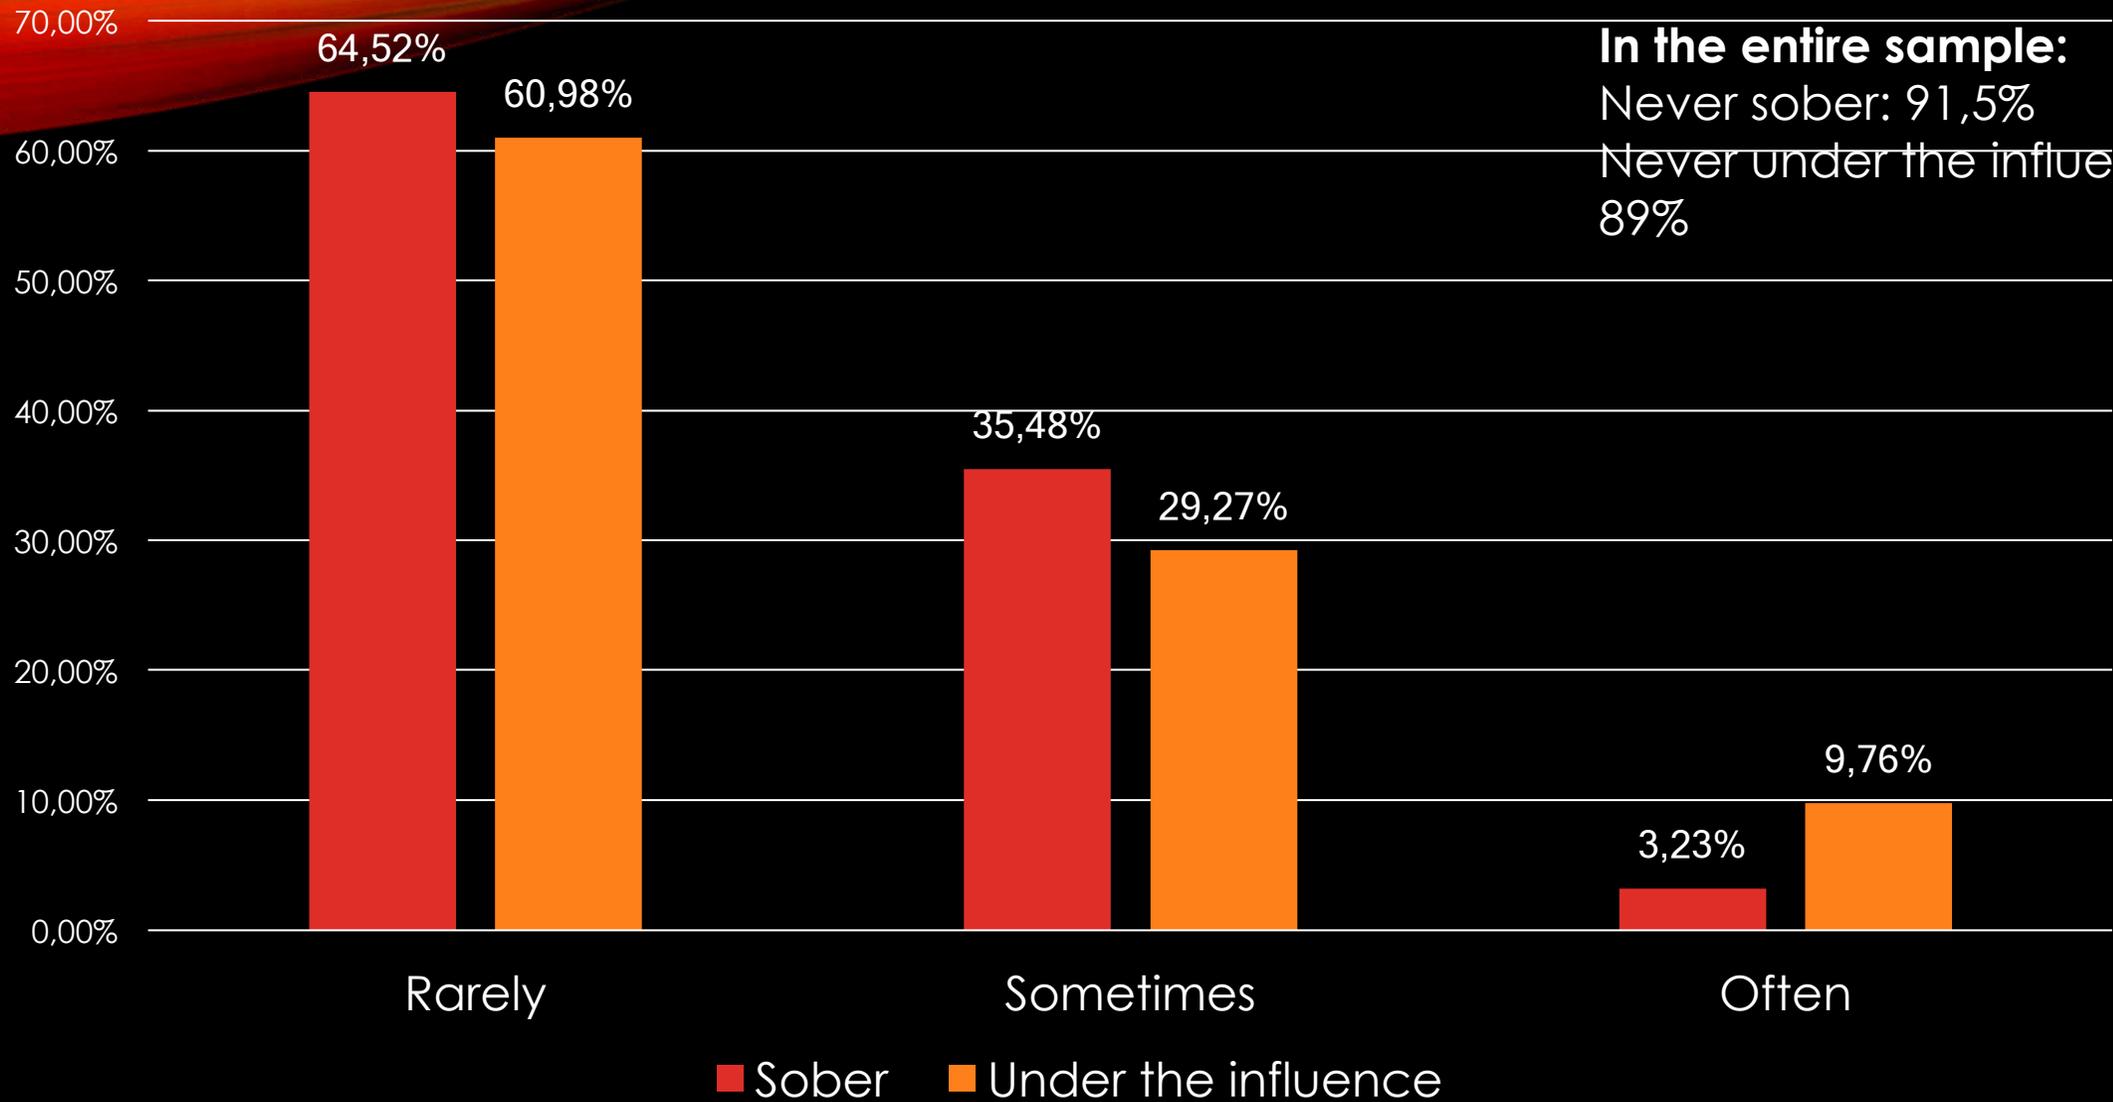

# Frequency of lubricant use

# RISKY SEXUAL BEHAVIOURS PREVALENCE

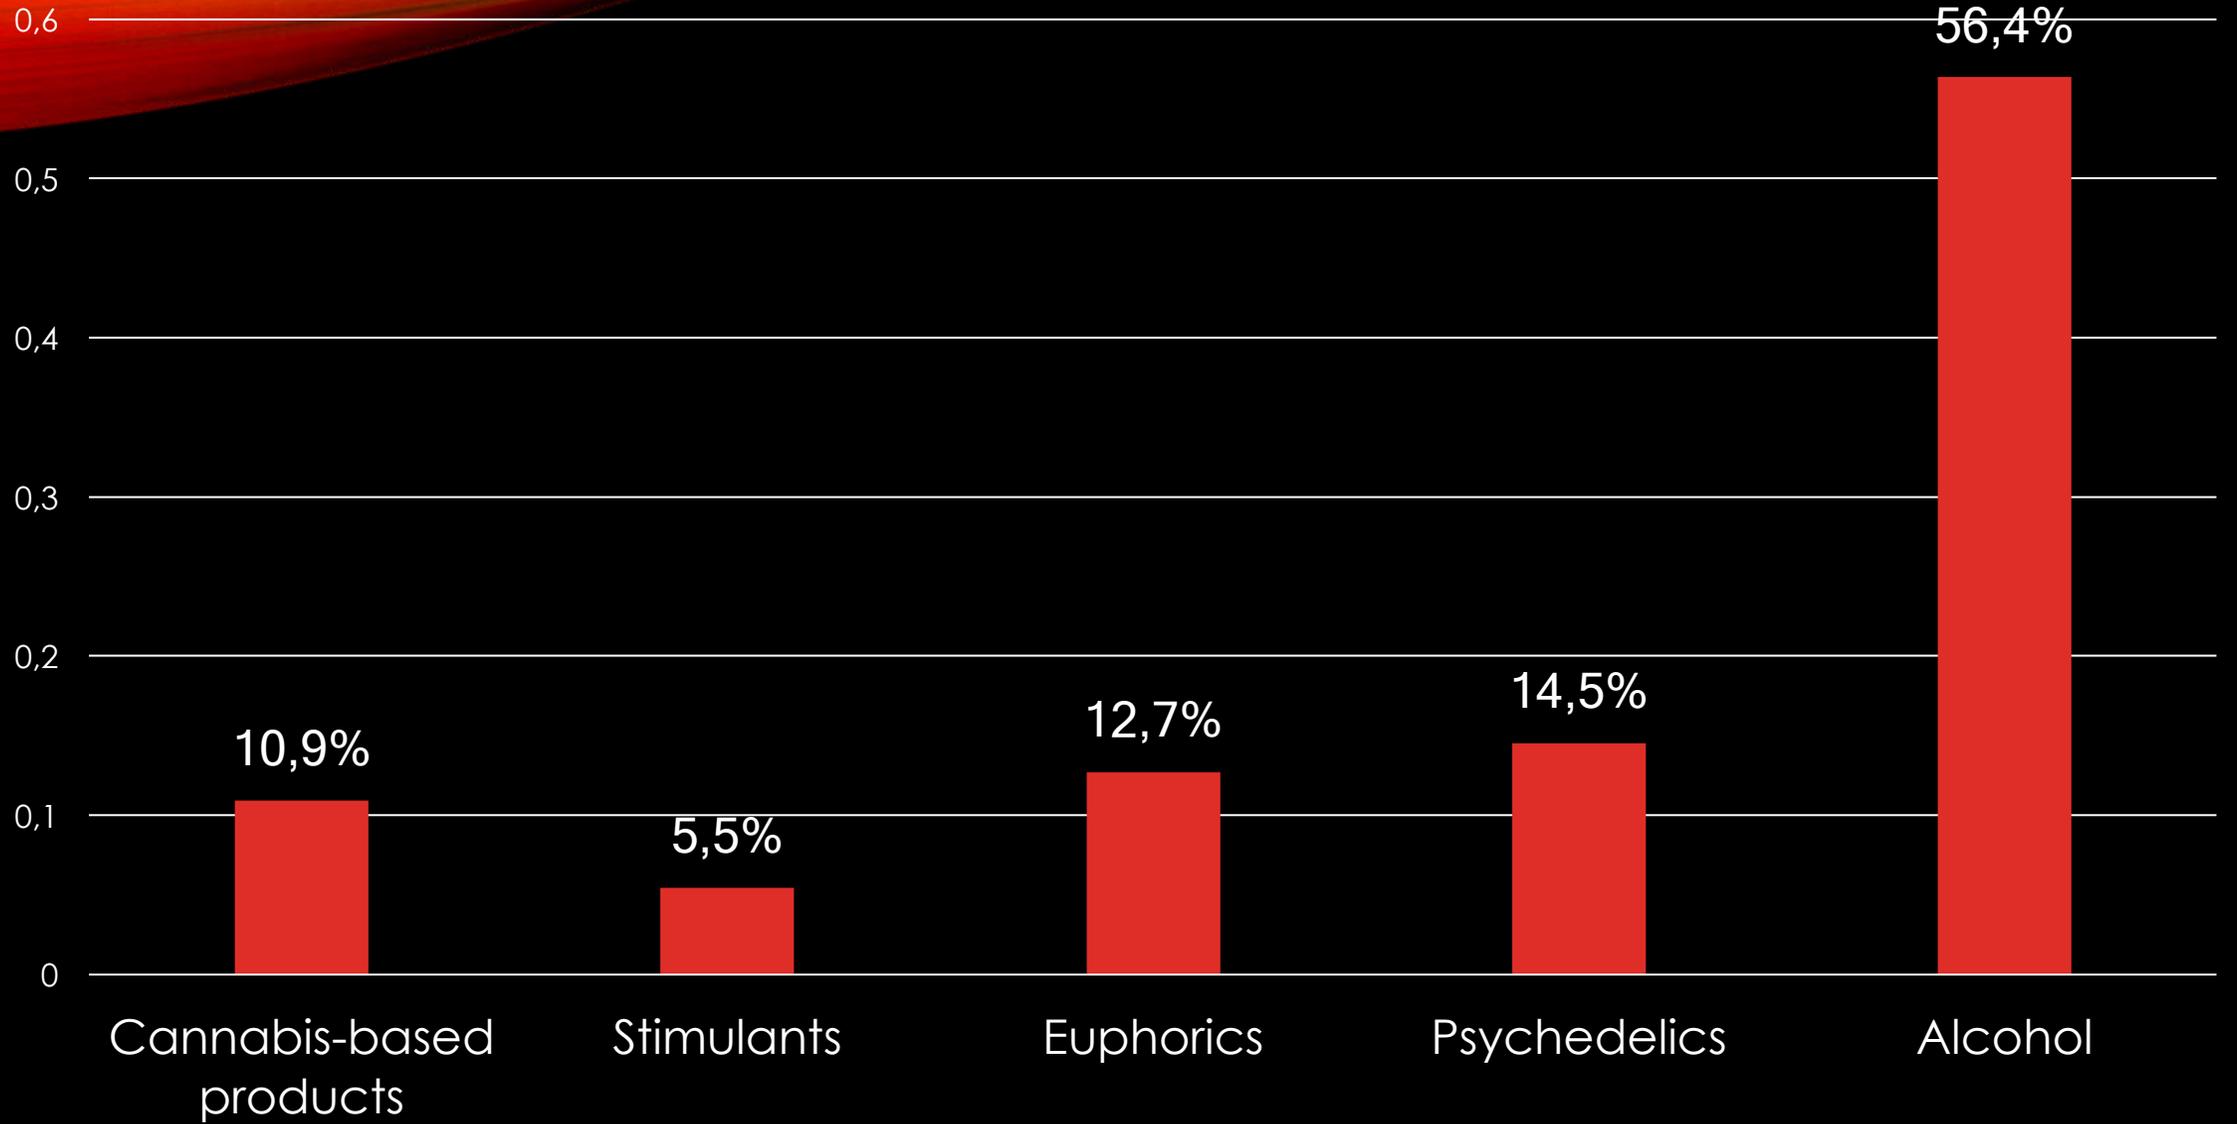

- **Sex involving 2+ persons:** never 95,2% (S), 92,5% (U)
- **Sex for exchange:** never 98,4% (S), 98.1% (U)
- **Anal sex:** never 98,8% (S), 92,0% (U)
- **Sex with person using drugs IV:** never 96,5% (S), 95,7% (U)

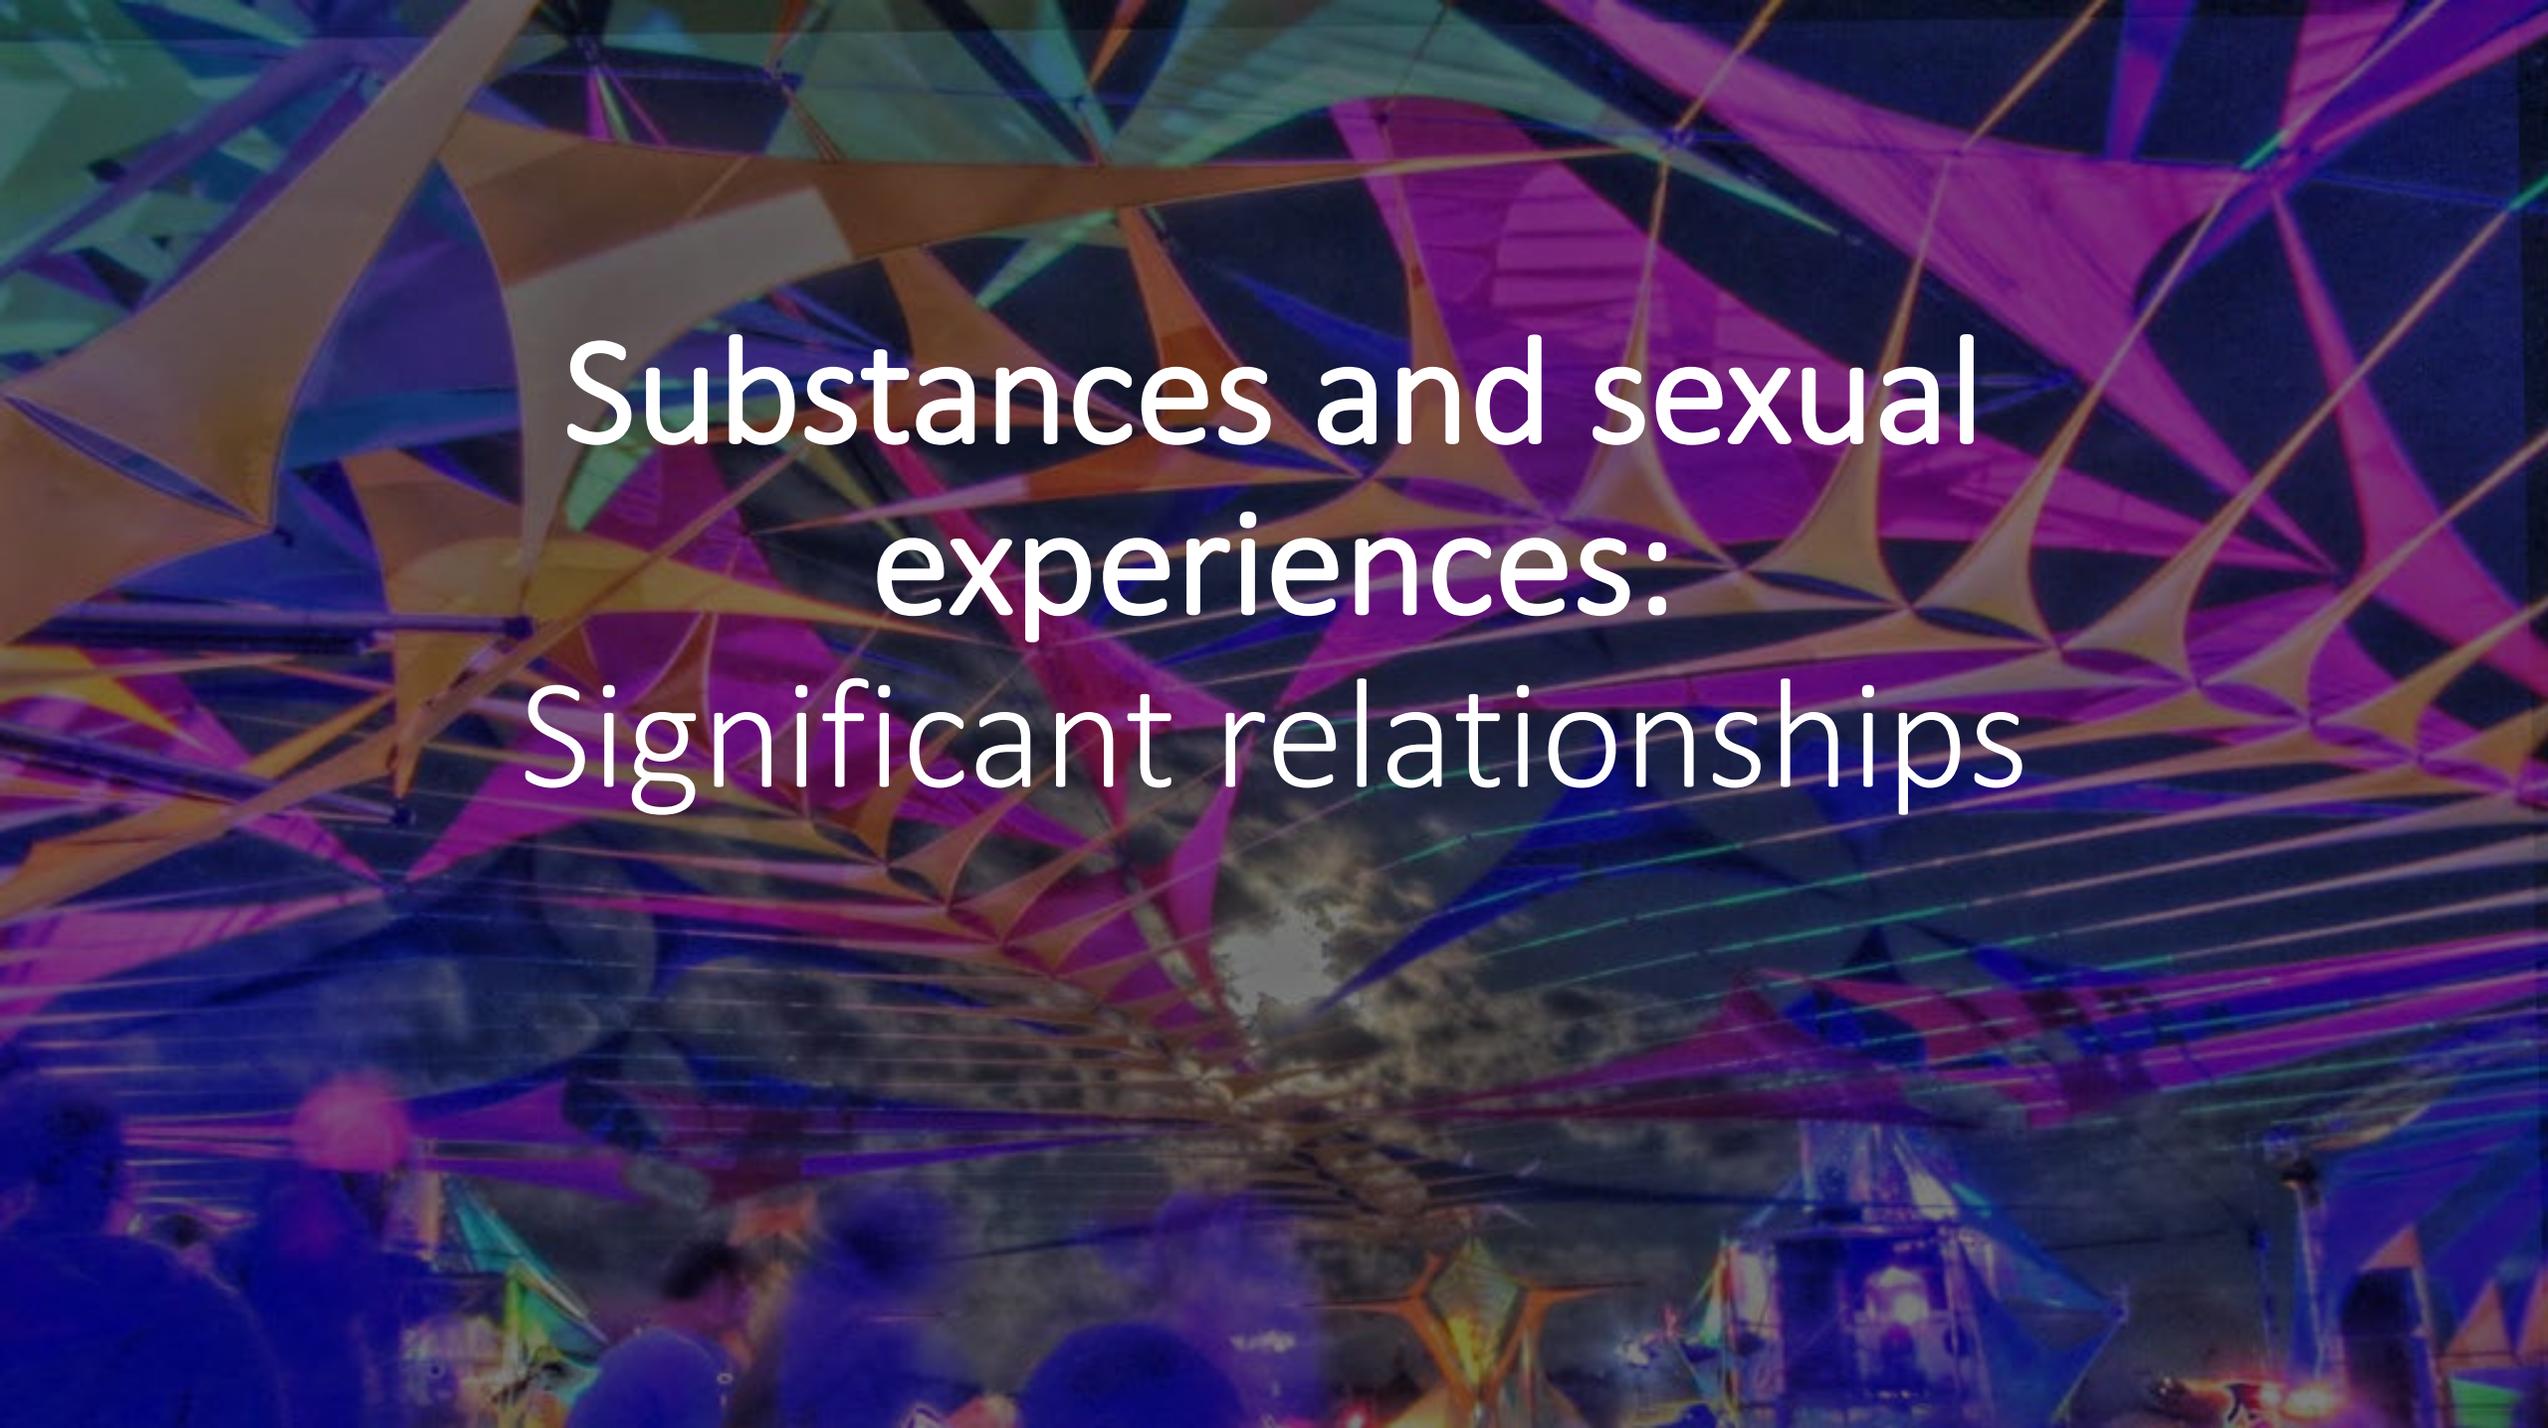

# Non-consensual sexual contacts

**In the entire sample:**  
Never sober: 91,5%  
Never under the influence: 89%

# Non-enthusiastic sexual contacts - substances

Substances and sexual  
experiences:  
Significant relationships

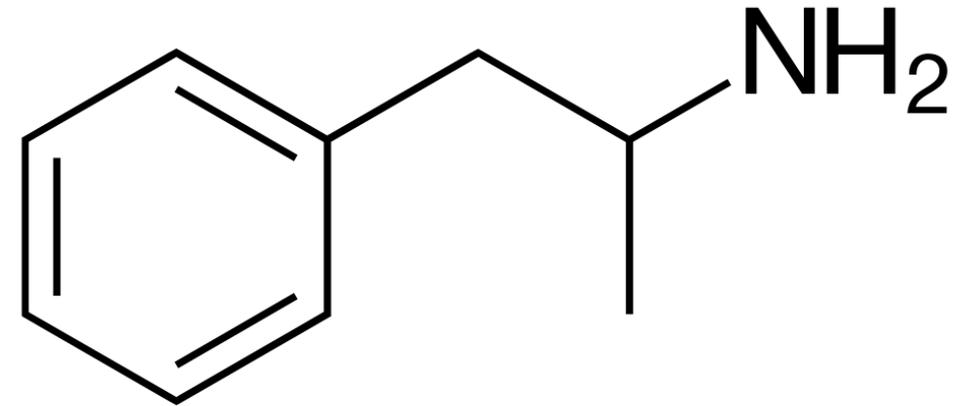

- Alcohol and unwanted sexual contacts

# Cannabis

- Frequency of sexual contacts while being sober
- Frequency of sexual contacts while being under the influence of (not specified) substances
- Frequency of non-consensual sexual contacts under the influence of (not specified) substances

- Frequency of engaging in sex involving 2+ persons while being sober
- Frequency of engaging in sex involving 2+ persons while being under the influence of (not specified) substances
- Frequency of engaging in sex for exchange while being sober
- Frequency of engaging in sex for exchange while being under the influence of (not specified) substances
- Frequency of engaging in anal sex while being under the influence of (not specified) substances

## Amphetamines

# Cocaine

- Frequency of sexual contacts while being under the influence of (not specified) substances
- Intimacy level with sexual partner while being sober (inverse relationship)
- Intimacy level with sexual partner while being under the influence of (not specified) substances (inverse relationship)
- Frequency of engaging in sex involving 2+ persons while being sober\*
- Frequency of engaging in sex involving 2+ persons while being under the influence of (not specified) substances\*
- Frequency of engaging in sex for exchange while being sober
- Frequency of engaging in sex for exchange while being under the influence of (not specified) substances
- Frequency of engaging in anal sex while being sober\*
- Frequency of engaging in anal sex while being under the influence of (not specified) substances\*
- Frequency of non-consensual sexual contacts under the influence of (not specified) substances

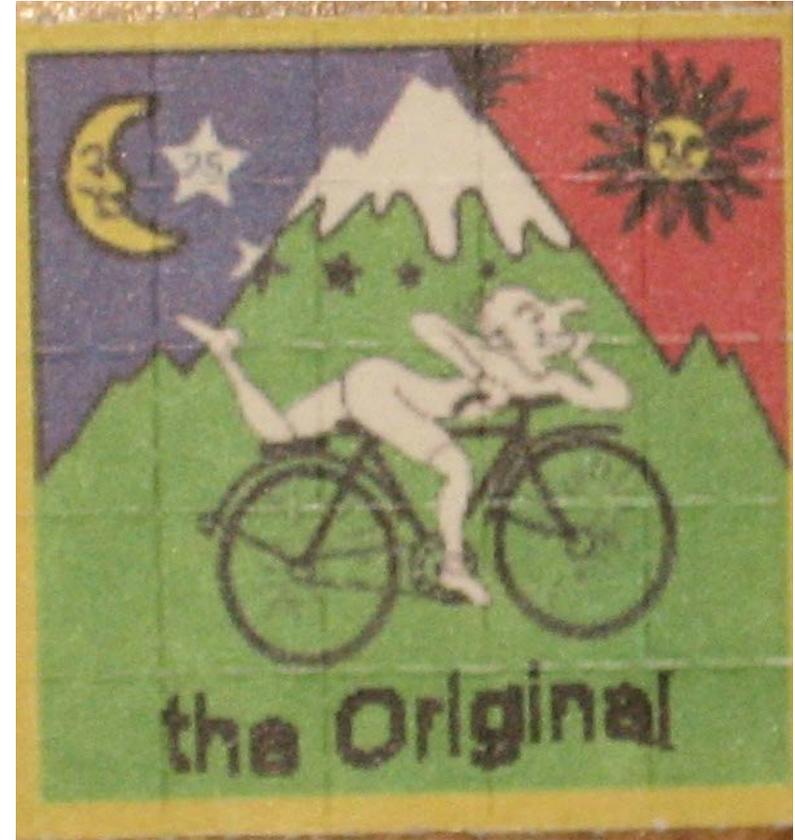

## MDMA

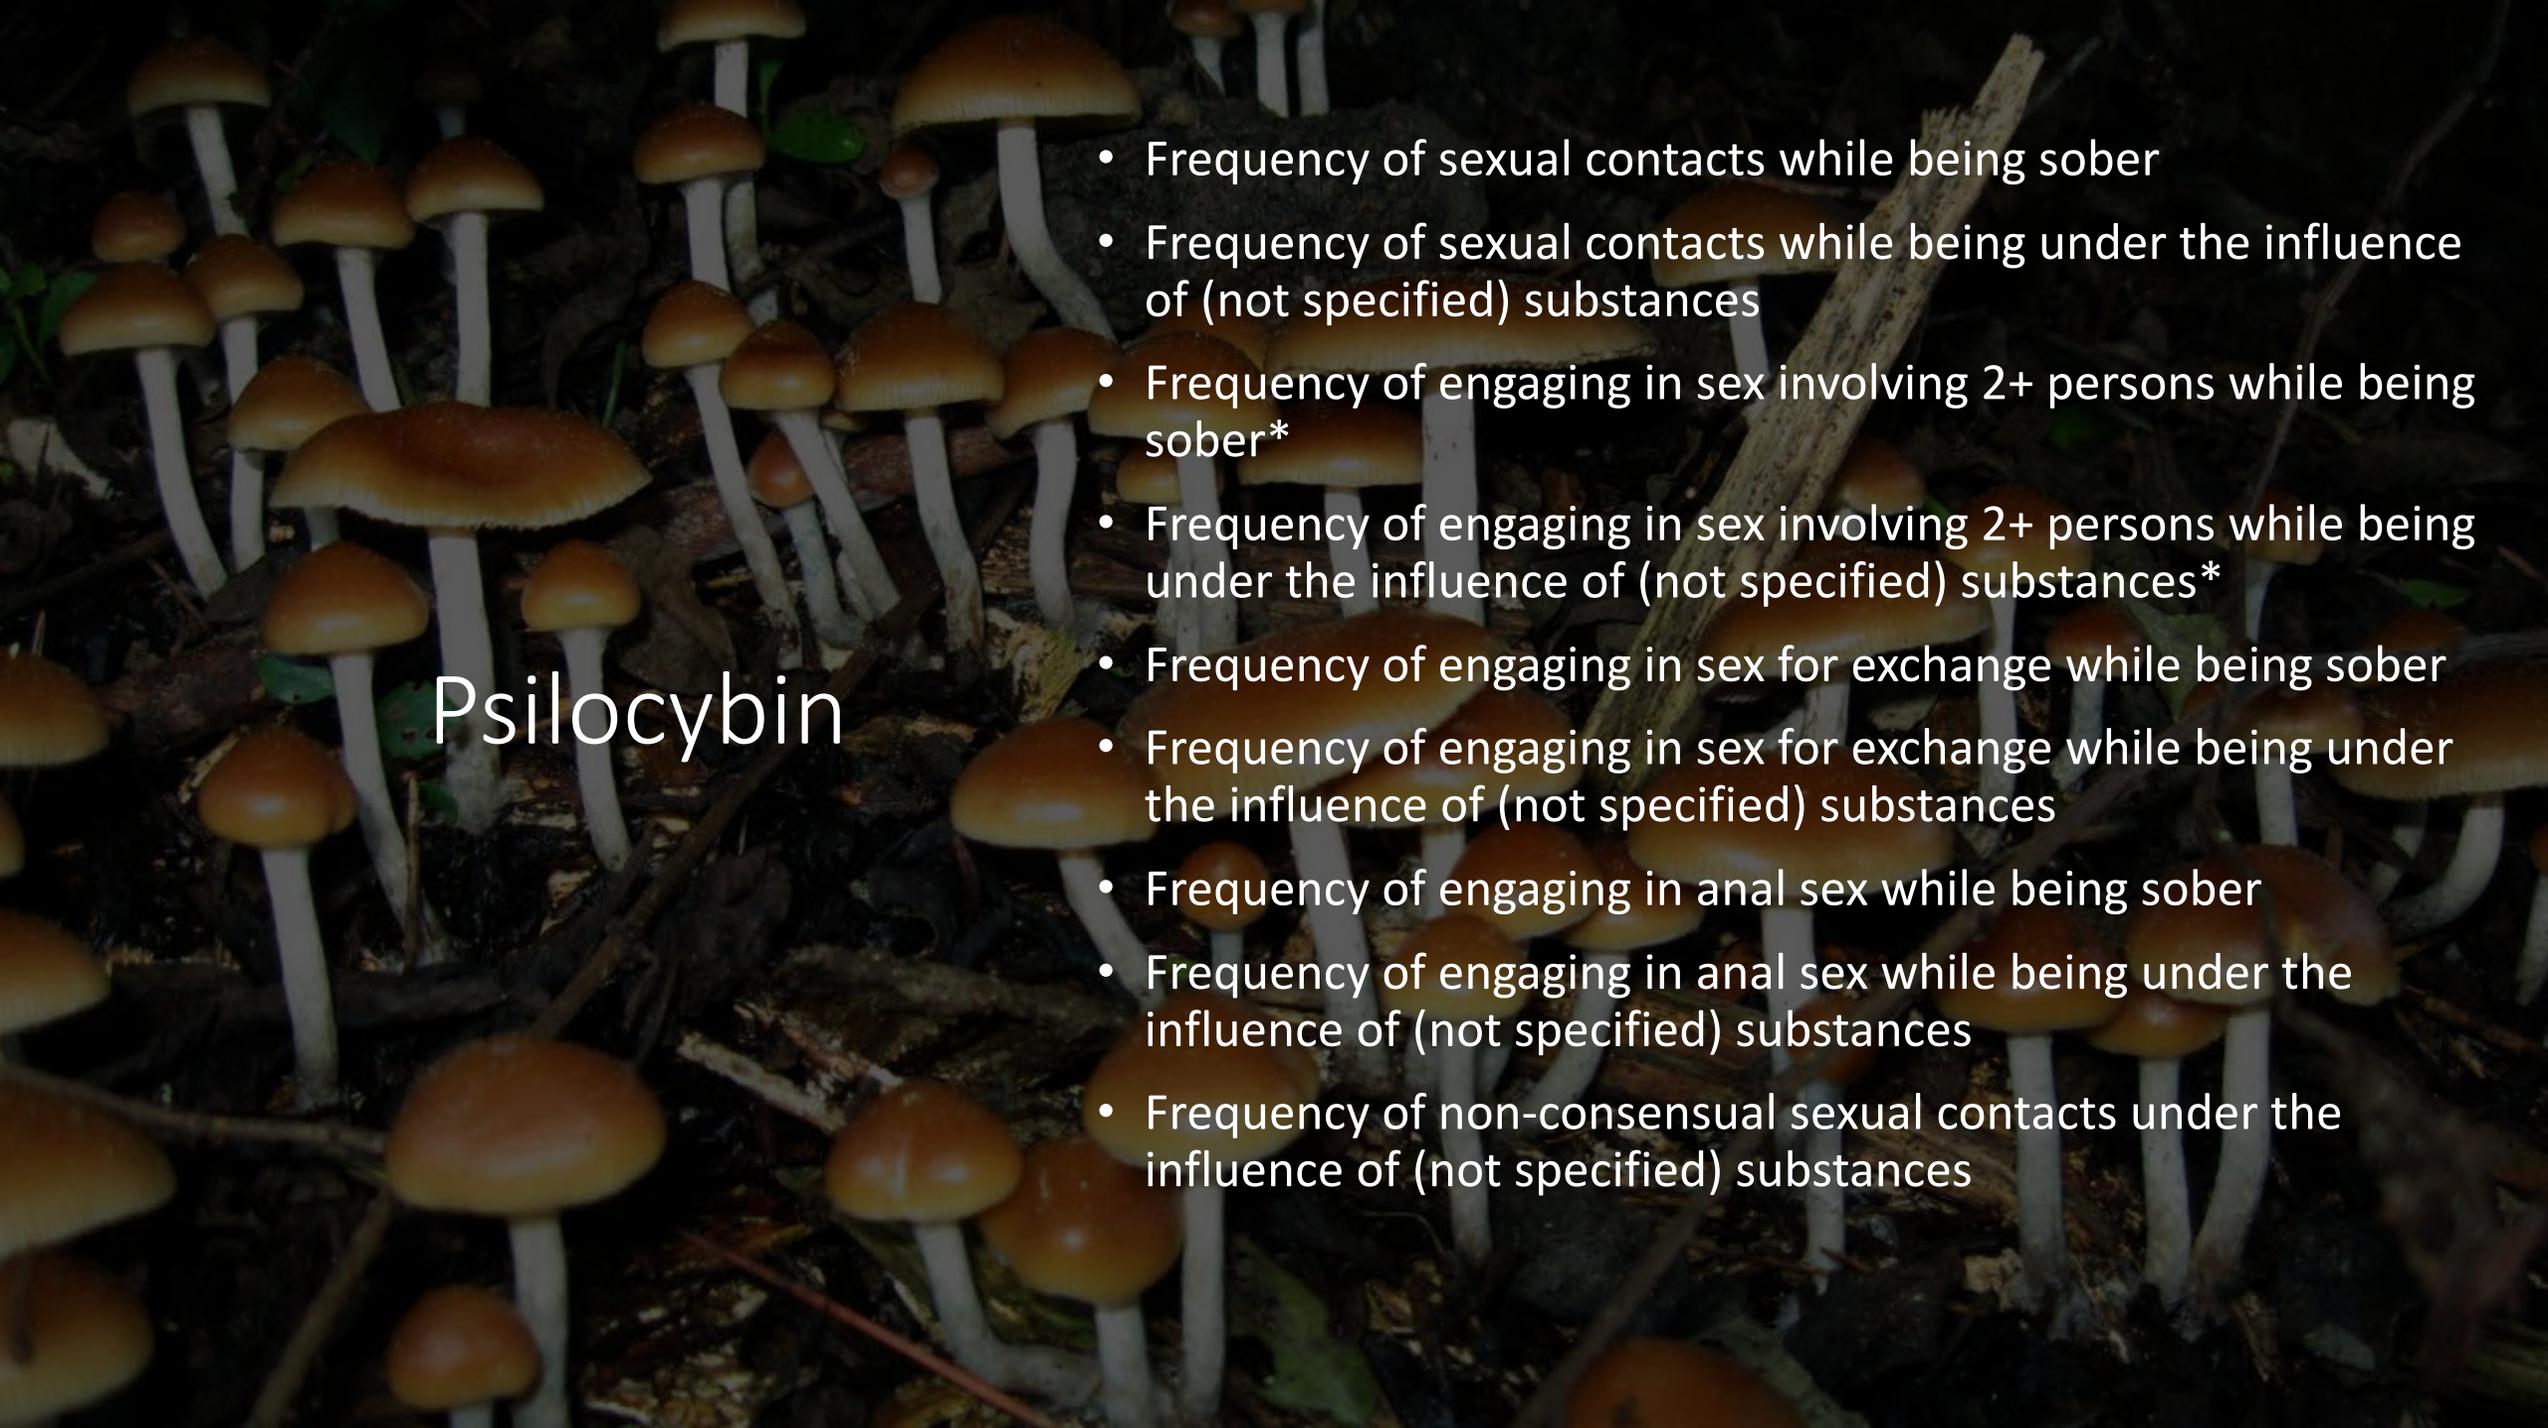

---

- Frequency of sexual contacts while being under the influence of (not specified) substances
- Frequency of engaging in sex involving 2+ persons while being under the influence of (not specified) substances

# LSD

- Frequency of sexual contacts while being sober
- Frequency of sexual contacts while being under the influence of (not specified) substances
- Frequency of engaging in sex involving 2+ persons while being under the influence of (not specified) substances

# Psilocybin

- Frequency of sexual contacts while being sober
- Frequency of sexual contacts while being under the influence of (not specified) substances
- Frequency of engaging in sex involving 2+ persons while being sober\*
- Frequency of engaging in sex involving 2+ persons while being under the influence of (not specified) substances\*
- Frequency of engaging in sex for exchange while being sober
- Frequency of engaging in sex for exchange while being under the influence of (not specified) substances
- Frequency of engaging in anal sex while being sober
- Frequency of engaging in anal sex while being under the influence of (not specified) substances
- Frequency of non-consensual sexual contacts under the influence of (not specified) substances

## Summary

- Increased intensity of substances use correlated with increased frequency of risky sexual behaviours:
  - sex involving 2+ persons
  - sex for exchange
  - anal sex
- Frequency of non-consensual sexual contacts correlated with intensified use of alcohol / cannabis / cocaine / psilocybin
- Alcohol as the most widely consumed substance when experiencing non-consensual sexual contacts
